

## Press Release

Garz, October 24<sup>th</sup>, 2024

### **easescreen Releases X2409: A Game-Changing Software Upgrade for Digital Signage**

**easescreen, a leader in the digital signage industry, announces the launch of its latest software version, X2409. This new release introduces a host of powerful features designed to optimize user experience, enhance security, and improve overall performance for businesses leveraging digital signage for communication and operational efficiency.**

easescreen continues its commitment to providing cutting-edge digital signage solutions that meet the evolving needs of organizations worldwide. “With X2409, we’re offering more than just an upgrade—it’s a comprehensive improvement to both the user experience and system security,” said Peter Feldbaumer, CTO of easescreen. “This release sets the stage for continued innovation in digital communication technology, enabling businesses to operate smarter and more efficiently.”

#### **User Interface Enhancements and Streamlined Management**

In X2409, the new interface adopts a cohesive design style and incorporates improvements that comply with WCAG 2.1 accessibility standards, ensuring a more inclusive experience for all users. Enhanced list functionalities—including improved filtering and sorting —further simplify content management.

A new soft-delete feature in Publish allows users to identify elements that have been marked for deletion but not yet removed from the player, enhancing content control. Additionally, administrators can now manage fonts more effectively, and the newly introduced onboarding wizard makes setting up new users faster and easier. Further improvements include more efficient screenshot viewing and a film roll-style campaign display that enhances workflow.

#### **Robust Security and Expanded Compatibility**

X2409 reinforces system security with improved protection against Denial of Service (DoS) attacks, particularly on ETP and HTTP servers. easescreen now supports only clients that are SSL/TSL compliant, ensuring that all data is transferred securely, meeting modern security protocols.

The software also introduces support for new hardware, expanding compatibility with devices such as the IIYAMA TExx12 series, IIYAMA XBH series, and HIKVISION DS-D60C-B. Additionally, ProDVX device integration has been upgraded with the ProDVX API 1.1, providing enhanced functionality.

### **eSign Roombooking Gets a Major Boost**

X2409 enhances the eSign module with a smoother, more reliable integration for Exchange services, improving synchronization for room booking systems. The interface's responsiveness has also been optimized, delivering a seamless user experience across the platform.

### **About eas@screen**

Founded in 1999, eas@screen is a global leader in digital signage solutions, trusted by clients in hospitality, healthcare, education, and retail. With a focus on security, innovation, and user-friendliness, eas@screen provides scalable platforms that help businesses effectively manage digital content across all display types.
