

## Press Release

Vienna, March 24, 2026

### **easescreen Update X.2602: New Features, Integrations, and Better Stability**

easescreen has introduced Platform Update X.2602, a new version of its digital signage platform. The release delivers numerous improvements in system stability, hardware compatibility, programmatic advertising, and system monitoring, and is particularly designed for large, scalable digital signage environments.

- Expanded hardware integrations including **BenQ, Hisense, Hikvision, Sharp ePaper**, and the latest **Samsung displays such as their ePaper series**
- New platform-independent widgets such as **NEWS, Power BI**, with many more to follow in the coming weeks
  - **Power BI Integration:** Enables the display of live data and interactive business dashboards directly on digital signage screens, making key metrics and analytics visible in real time
- Integration of **Microsoft Entra ID** and **Google login services**
  - **Single Sign-On:** Allows users to securely log in using their existing corporate or Google accounts
- New **calendar-style publishing system** for the web interface that enables detailed content scheduling as well as various enhancements to template and campaign tools
- **eSign available as a SaaS model**
- **Programmatic advertising support**, including **VAST XML requests** and **dynamic asset downloads**
- Integration with **audience targeting and tracking systems**
- Improved **client synchronization, file transfer reliability**, and optimized **retry mechanisms**
- Enhanced **system monitoring** through improved logging, status reporting, and extended device support
- New **configuration options for player startup behavior** and **file synchronization**
- Numerous **stability fixes and performance improvements** across server and player components

#### **Stability and Performance Improvements**

- Improved system stability under high load
- Reduction of deadlocks in database transactions
- Optimized file synchronization between server and players

### **Bug Fixes**

- Fixes for issues with playback status reporting
- Correction of display and processing of GIF animations
- Fix for device visibility within the system
- Improvements to preview rendering
- Fixes to synchronization behavior
